

Coding exercise: Conformal inference

Foundations of Machine Learning - Oxford Summer School 2025

Maximilian Kasy

In this problem, you are asked to implement some simulations and estimators in R, or in Python. Your code should run from start to end in one execution, producing all the output. Output and discussion of findings should be integrated in a report generated in R-Markdown, or from a Jupyter Notebook. Figures and tables should be clearly labeled and interpretable. The findings should be discussed in the context of the theoretical results that we derived in class.
